

Either you can import cert in the java cacerts -- `JAVA_HOME/jre/lib/security/cacerts` (not recommended)

**`JAVA_HOME/bin/keytool -importcert -trustcacerts -file rootCA.crt -alias reed.com -keystore D:/Installation/JDK1.8/jre/lib/security/cacerts -storepass changeit`**

Or create your own custom cert store (recommended)

**`JAVA_HOME/bin/keytool -importcert -trustcacerts -file rootCA.crt -alias reed.com -keystore C:/Users/Alok/Desktop/certs/cacerts.p12 -storepass changeit -storetype PKCS12`**

There are normally three changes you have to do in coding

=====

```
System.setProperty("javax.net.ssl.trustStore","cert_store_path");  
System.setProperty("javax.net.ssl.trustStorePassword", "cert_store_password");  
environment.put(javax.naming.Context.SECURITY_PROTOCOL, "ssl");
```
